### Annotation

This article describes in detail the pedagogical system of formation of spiritual maturity in students in modern conditions, the social basis of the formation of students' spirituality, the socio-psychological basis of the spiritual formation of students.

**Keywords:** pedagogical system, spiritual maturity, modern research, spiritual education, modern direction.

### Introduction

Nowadays, spiritual and moral education plays an important role in the spiritual formation of students. An important goal of spiritual and moral education is to give students the opportunity to find their place in social life, to develop themselves, to determine their own destiny, to create their own destiny.

Spiritual and moral education is the spiritual and moral formation of students through the use of universal, national values. This is, of course, crucial in fulfilling the task of the learning process[1].

Strengthening the independence of our country, the fate of reforms in socio-political, economic, military-legal and other spheres, building the future of the country depends on the spiritual and moral education of students, high consciousness, social activism. - The fate of development, - said the President, - will be decided by spiritually mature people.

Technical knowledge, the ability to master complex technology must go hand in hand with spiritual maturity, independent thinking[18].

Mental intelligence and spiritual potential are the two wings of an enlightened person[19]. "So today, every student and every age should have spiritual immunity." A deep understanding of the sacred duty of the motherland to the people must be able to combat any immorality in society[4].

## Main Part

Today, the whole world is fighting not for power, but for reason and thought. And the pinnacle of contemplation is reached through spirituality. Students and young people who have become the goal of spirituality strive to be second to none in any field, in the world[17].

Spiritual ideas never develop spontaneously in space. Historical, educational and social factors, especially family and spiritual upbringing in the family, play an important role in its emergence and formation[30]. The family is a spiritual bulwark that guides young people to maturity[5].

Today, the socio-economic development of society can be achieved through the development of a spiritually mature person in the education system[20]. To this end, pedagogical tools and forms of developing students' spirituality in higher education and public education have been developed[16].

One of the social foundations for shaping the spirituality of students is education based on the unity of the family, school and community, the rich national cultural and historical traditions, customs and universal values of the people[21]. The fate and development of society is largely in the hands of higher education students, that is, professionals[31]. Therefore, in modern conditions it is necessary to educate students on the basis of the pedagogical system of formation of spiritual maturity[15].

1. A healthy generation is a healthy lifestyle in which every parent who gives birth to a child should feel responsible for the country and the nation[28].
2. Physical fitness - Each parent should live with the responsibility of giving birth to four healthy children[29].
3. Spiritual refreshment - a stimulating and sharp mental maturity and spiritual health of the child on the basis of a healthy offspring and physical strength. employees and community members are equally responsible[6].
4. Common sense - all four members are healthy, physically healthy, mentally healthy, people of faith understand the civic duty to the Motherland, Motherland, parents, people[22].
5. Belief is the devotion of students to their parents, homeland and people.
6. Education - In a market economy, social life requires that every young person be educated in their chosen profession[14].
7. Spiritual height - the ability of a healthy generation to distinguish spiritual height from spiritual poverty[23]. It is the responsibility of the family and its members to fulfill this responsibility[26]. Spiritual education also plays an important role in the spiritual development of students in higher education[13]. This spiritual education is inculcated in the minds and hearts of young people through moral, intellectual, labor,

professional, patriotic, physical, environmental and aesthetic education[24]. Moral education develops morality, ethical norms, national universal values. Moral education - develops the intellectual abilities of young people; patriotism - devotion to the country, love for it, contributes to its development[7].

Labor education - awakens a sense of love for work, teaches diligence[27]. to be enterprising, to develop their abilities without hesitation, to be strong-willed, highly skilled, not afraid of competition and to be able to overcome it serve social maturity. Students with these qualities will also be able to withstand any economic crises that may arise in their future practice[12]. Spiritual education is a key pedagogical factor in the mental, intellectual, spiritual and physical development of students[25]. At the current stage of development of society, the development of the country in many ways determines the pedagogical possibilities of the comprehensive formation of the individual in the process of continuing education[4-41]. Therefore, the prospects of education, the knowledge, professionalism and spirituality of the specialists who are currently being trained will allow them to build their future[8].

In shaping the spirituality of students, it is necessary to educate them, to enjoy the prospects of science, the achievements of literature and art, national and national, as well as universal values[11].

It is possible to bring up with the help of national ideas. Otherwise, in today's world of globalization and the information crisis, one can be distracted by strange ideas[9].

## **Conclusion**

In conclusion, we should be proud of the development of the spiritual sphere in our country today, because pride in the achievements in this field today creates in students a sense of responsibility for the future and the future of the Motherland[40]. At a time when ideas are becoming the backbone of our planet, we are making progress only through commitment to our national spirituality[32].

One of the main layers of spirituality is knowledge. Spirituality develops on the basis of knowledge. The essence of science is knowledge[41]. The level of spiritual knowledge of each person from an early age is the basis of the human qualities that are formed in him later[10].

Human morality is achieved only on the basis of intellect, character, behavior, and knowledge. Achieving spiritual maturity depends on deep knowledge and enlightenment.
