Languages in Social-Humanitarian Directions

Annotation

The rapid development of economic, political and cultural relations of the Republic of Uzbekistan with other countries and the integration of the state in the field of education in our country and in the world community required a change in the entire educational system and the upbringing of the growing generation. "Modern conditions require the public education system to view all its steps as one, ensuring general and special education, professional training, spiritual and moral development of young people as an individual." To do this, it is necessary to significantly strengthen the educational system of the school, higher and secondary education, to update educational standards, to enrich them with treasures of World Culture. Therefore, at present, problems such as language and culture, the whole role of language and culture in the development of society, the organization of full personality and culture relations skills are being investigated. In this article, opinions and comments are made on improving students ' foreign language training on the basis of an integrated approach.

Keywords: Foreign language, integration, gaming, innovative technology, technological tools, techniques, techniques, English lessons.

Introduction

After our country gained independence, the interest in teaching other languages increased, many opportunities were created for young people. In accordance with the recommendations of the European framework for assessing the knowledge and skills of Foreign Language teachers, new techniques and requirements for teaching a foreign language have been developed in the country. He noted that textbooks were created for students in secondary schools and technical institutions. The study rooms that meet these requirements are equipped with stands and new information and communication technologies. Numerous studies have highlighted the importance of foreign languages in the Republic of Uzbekistan, as well as modern technologies necessary for their study.

Learning a foreign language is becoming increasingly popular. Each of the four directions of Foreign Language Science (Reading, reading, listening, understanding and speaking) provides specific concepts and skills. The successful use of modern Information Technology in the educational process is called educational technology. It also seeks to improve the quality and effectiveness of education by introducing modern technologies into the learning process. There are various advantages of using such information and communication technologies, especially for the study of a foreign language. Modern technology plays an important role in language learning and teaching. Every aspect of learning a foreign language will benefit from the use of Technology (reading, reading, listening and speaking). For example, it is impossible to listen and understand without the use of computers, players and compact discs. One of the most basic aspects of language learning is listening. This will require the student to focus his / her attention on the pronunciation, grammatical rules, vocabulary and meanings of the speaker at the same time. The ability of students to understand and use information and communication technology is a fundamental aspect of the use of new technologies in education.

One of the most effective ways to teach and learn a foreign language is to use these modern technologies. This process includes:

• When using computers, the student can watch and listen to foreign language videos, shows, dialogues, movies or cartoons.

• It is possible to listen and watch radio broadcasts and TV shows in foreign languages:

• The lesson will be more interesting if dialogue with speakers is organized through modern technologies and programs.

If students use these resources, the process of learning a foreign language will be more interesting and effective. Interactive games are becoming widespread in schools today. It's a common understanding that a number of game-based activities can help children demonstrate their abilities, focus, expand their knowledge and skills, and strengthen their bodies. The movement that stimulates and accelerates the reader is the basis for the use of gaming technology. Psychologists believe that the psychological mechanics of playful behavior is built on the basis of the innate needs of the individual to be able to manifest himself, find a stable position in life, manage himself and fully achieve his own potential. Widely recognized concepts and tactics of training should be at the center of any game. During the games, the reader is engaged in more activities than in a regular class, and it works more efficiently. It is worth noting that this game is primarily a training tool. The game lessons is increased students' interest and they try to win, so the teacher uses them to teach the students. The student wants to believe that he can play, speak, listen, understand and write in

English.Also, according to the research of South American Scientists, when students learn a language mainly through only one direction, this becomes a very tedious occupation for them. For this reason, they recommend integrating the lessons with other disciplines: foreign languages, exact Sciences (Mathematics, Physics, algebra, geometry), humanities and natural sciences (biology, geography, Zoology, economics), etc. We can definitely integrate even English lessons with subjects such as nature or physical education. As long as the student is able to self-analyze and systematize new information, Modern Language Teaching tries to create a more cultured personality. The use of new methods is a fundamental part of system upgrade. Taking this into account, teachers will be able to get acquainted with their most advanced peers, absorb their knowledge and use it in their work to significantly improve the education system. A number of companies are taking multimedia opportunities to new heights when it comes to sharing and receiving information. The use of computers and other technological devices determines the success of the entire educational process.The culture of communication is of global importance today, after all, the relations between individual people and the whole people and states, the understanding and interaction of each other are based on this. It can be seen that at the present time, the importance of the development of the structure of the educational system of the Republic of Uzbekistan is visible, especially considering the transition from civilization to anthropic civilization, the humanization and humanization of education, the achievement of national and Universal world culture, the national program of Personnel Training is aimed at this. This in turn requires the introduction of innovations in the educational process in order to improve the quality of training of young cadres. These are the methods of teaching foreign languages in groups of higher educational institutions that do not specialize in the study of Uzbek language secondary school, lyceums, colleges and languages. The creation of new pedagogical technologies and teaching tools in the teaching practice requires the introduction into the practice of aprobation, since the technologies used today do not ensure the desired acceptance of the material of the program on the scale of the formation of the cultural disposition of the students (along with language, speech and communication), which negatively affects the quality of communication

Level of study of the problem. The work of scientists and professors in the field of methodology and pedagogy is devoted to the problem of learning English in recent years in the audience of Uzbek schools and universities, and a number of dissertation studies on the problems of learning English have been carried out by others. It is difficult to come up with in the study and understanding of the artistic work of a second culture by the owner of one culture which was the object of the search for a

number of famous linguists, sociologists and Methodists, as well as it is necessary that each subject being mastered must be inextricably linked with extracurricular activities. To do this, the organization of stage performances in their place will give a good effect if they are demonstrated by conducting role-playing games. From this point of view and with a fair view, the chosen and implemented problem (topic) itself is of utmost relevance, while its role in the learning process itself is unequivocally significant. In the educational process, primary education is one of the main periods. If the student has a good mastering of the subjects of training during the primary school, then in the upper classes, too, will have good results. They have achieved good results in general secondary education. In conclusion, the ability of students to think logically, fluency and quick and accurate response are improved when innovative methods are used in teaching English language. The main way of the improving student's interest in learning such strategies. The student will make all the efforts to prepare well for the lessons. As a result of this, students become active participants in the educational process. Since the educational system strives to educate a free-thinking, all-round, mature individual, we will make our contribution to the creation of effective ways to effectively use innovative technologies for future instructors. Every English instructor should be an experienced educator and psychologist. Of course, the teacher should know mathematics thoroughly. At the same time, a thorough understanding of mathematics is considered a separate set of knowledge. Every English instructor should have a thorough understanding of this material. In order to summarize the ideas, put forward, it is worth paying attention to the fact that students of higher education should be taught English grammar in an interesting way.
