**Annotation**

Prospects for digitization of order desks, economic digitization of order desks in Samarkand region in 1989, 1990, 1991, telephone communication, popularity of Uchkara grapes and raisins, the role of Uchkara raisins in maintaining the health of astronauts, Samarkand region 2021 economic analysis, results, economic efficiency, conclusion and recommendations as well as the literature used.

**Keywords.** Digital economy, order table, active entrepreneurship, entrepreneurship, business, "Field-stol", " Store-consumer ", "Field-livestock complex", "Field-house" and others.

**Introduction:**

On March 24-26, 2022, Tashkent hosted the first Tashkent International Investment Forum (TICIF) in the Republic of Uzbekistan. It was attended by more than 1,500 companies from 56 countries. President Shavkat Miromonovich Mirziyoyev delivered a speech. In his speech, he said that all the legal framework has been created for foreign investors and called on investors to invest. The main purpose of the forum is to attract foreign investors, representatives of financial and economic organizations,

energy, machinery, electrical engineering, information technology, textiles, agriculture and food industry, construction and other sectors interested in expanding their activities in the Uzbek market. The President's report noted that in 5 years the GDP is expected to reach \$ 100 billion and annual exports to \$ 30 billion, and the efforts of the private sector to increase its share in GDP to 80% will increase the economic power of the country [1]. On August 20, 2021, the President held the first traditional and offline meeting with entrepreneurs, which was attended by about 10,000 entrepreneurs. Today, the transition to the digital economy solves many problems. This will ensure employment, reduce poverty, ensure transparency of processes and attract foreign investors to our economy, use local and foreign experience.

### **Method and Materials**

The number of patients with cancer and diabetes is growing in our country. The famous American doctor N. Walker has written many books about carrots. His assessment of carrots was as follows: "Carrots are a miracle of our time in the fight against the dreaded cancer" [3] The solution of problems in networks and within the network depends on personnel. In preparing the article, we analyzed using monographic, statistical, comparative and other methods.

### **Results and their Analysis**

The ancient village of Uchkara in Khatirchi district of Navoi region, which specializes in viticulture and raisins, is located in the foothills of the **41st** meridian and **41st** parallel of the globe. The sugar content of grapes reaches 38%. During the former Soviet era, cosmonauts brought special representatives from rural farmers from Moscow to eat Uchkara raisins. In Uzbekistan, the sugar content of grapes is 26%. Grapes with a sugar content of **17-18%** are used for consumption in the world. However, in the networks of this district there are no order desks and subjects of the introduction of the digital economy, modern service infrastructure. In 2021, the profitability of the horticultural sector, which has the highest economic performance in Samarkand region alone, amounted to **48.3%**. The highest rate in animal husbandry was in beekeeping, with a profitability rate of **35.7** percent. The level of profitability in horticulture was 12.6 points higher than in beekeeping [2,4]. Scientific and practical recommendations developed by scientists and teachers of the Samarkand Institute of Veterinary Medicine (former agriculture) were introduced in Samarkand. However, by the new era, the operation of this order table had stopped. Therefore, it is necessary to reorganize agricultural service brigades, including "field-

table", "field-livestock complex" and other forms of service for vegetable growing on the basis of scientific and practical recommendations. **Here are some examples from foreign experience:** Orders from the population in Tokyo, Japan, take up to 12 minutes, regardless of location, and in Ottawa, Canada, orders take up to 10 minutes per customer.

### **Conclusions and Recommendations: Conclusion:**

1) In 2021, the lowest level of profitability in agriculture of Samarkand region will be 9.2% in silkworm breeding; in oilseeds -12.5%. **Our proposals:** 1) Establish appropriate control over the introduction of the digital economy in the country; 2) Restoration of the order tables with the participation of scientists and educators on the basis of their scientific and practical recommendations; 3) It is expedient to establish joint programs and joint ventures with developed countries in the introduction of the digital economy in the operation of order desks.
