

EDUCATING STUDENTS TO BE MATURE AND WELL-ROUNDED UNDER THE INFLUENCE OF THE EXTERNAL ENVIRONMENT

Miryokubov Mirjahon Mirrahmon oglu

Student, Nam DU Primary Education Area Group 102

Annotation

The "National Program of Personnel Training" also pays special attention to "the harmonization of human, social and environmental relations", "improving the environmental and sanitary education and training of students." tiber focused. Therefore, the requirements of the state educational standard for general secondary schools, especially for primary school students, require them to have a sense of environmental responsibility and knowledge in the field of nature protection shown.

Keywords: ecology, environment, security, environment, environment, myth, myth. President of the Republic of Uzbekistan Sh. Mirziyoyev's announcement of 2017 as the "Year of dialogue with the people and human interests" on improving the system of public administration has launched a new stage of development in the life of our people. the leader put a number of tasks before the person. Because the interests of the people take precedence over everything else. Creating a healthy ecological environment for the people to live a healthy life, ensuring the cleanliness of the environment is one of the most pressing issues today, which requires the formation of a positive attitude to the environment for every citizen.

The Decree of the President of the Republic of Uzbekistan on improving the system of public administration in the field of ecology and environmental protection has been developed to radically improve public administration in the field of environmental safety and environmental protection in the Republic, improve the environmental situation , to prevent the harmful effects of waste on the health of citizens, to create favorable conditions for improving the living standards and quality of life of the population, to further improve the system of collection, storage, transportation, disposal, recycling and disposal of household waste was determined.

The deepening ecological crisis is having a negative impact on the development of our country. For example, farming and animal husbandry are becoming more difficult due to unfavorable natural factors, deteriorating living conditions due to the deterioration of the environment and drinking water quality, and increasing incidence of various diseases. To solve these problems, it is necessary to create environmental education

among young people. It is advisable to start with kindergarten, school and college students to develop an understanding of environmental education. The purpose of environmental education and environmental awareness in kindergarten, school and college students is to teach them how to solve environmental problems.

In a dialectical analysis of the problems of social ecology, the first President IAKarimov noted that nature and man interact on the basis of certain laws, the violation of which leads to irreparable environmental disasters and assesses them as one of the hidden threats to national security. . "To ignore it, to sit idly by, is to condemn oneself to death. Unfortunately, many people still treat this problem with indifference and irresponsibility, "he said, emphasizing the responsibility of citizens for nature and the environment. The Constitution of the Republic of Uzbekistan also states that "Citizens are obliged to be careful with the environment."

This means that we need to start with kindergarten, school and college students and cultivate in each child a sense of respect, care and responsibility for the nature and environment of our country. The child lives under the influence of the natural and social environment around him and on the basis of moral and ecological propaganda established in the neighborhood. After all, the beautiful nature of our country, its future is determined by their attitude to the environment.

Abu Rayhan Beruni, Abu Ali ibn Sino, Abu Nasr Farobi, Kaykovus, Yusuf Khas Hajib, Amir Temur, Zahiriddin Muhammad Babur and others, who laid the foundation of modern science in the field of environmental protection, have a responsible attitude to the environment. we proudly mention the names of many other great figures. In the rare works of great scholars, it has been proved that man's attitude to the influence of the external environment is manifested in both negative and positive attitudes. In this regard, it should be noted that the potential of Uzbek folk pedagogy is enormous. The use of various methods in ecology and environmental protection in the natural sciences, ecology, geography, as well as the use of folklore is very effective.

Samples of folklore are also a source of formation of students' understanding of environmental education. In folklore, the image of man is not imagined without nature, without its whims. In folklore, the protagonist overcomes evil and frees nature from all kinds of evils. Folklore is approached through the formation of concepts of environmental education in the minds of students. Folklore did not appear all at once. From the oldest genres of folklore - myth, legend, legend, folk songs, seasonal and ceremonial songs, and fairy tales, epics, proverbs, riddles, anecdotes, loaf, folk drama,

askiya, historical songs and others are composed as a result of natural resources, through which students can form a positive attitude towards the environment.

The earliest examples of folklore are the myths and legends about man's weakness in the struggle against nature, which forced him to find answers to events that seemed unknown to him, to create some kind of understanding and imagination. The purpose of developing students' understanding of the environment is to develop a responsible attitude towards the environment. The sharpness, curiosity, benevolence, confidence, brightness of the imagination, the strength of the memory, and the clarity of thought of the young student are all signs of increased responsibility.

In particular, one of the main tasks of teachers is to solve current environmental problems, to provide students with environmental education, the formation of environmental awareness, environmental education, environmental awareness and environmental awareness. is one.

In the protection of ecology and the environment, we educators also have an important task to perform. In ecology and environmental protection, it is necessary to educate young people about ecology, the environment in the process of education, which is part of the process of protecting the environment, introducing students to nature. Nature is made up of the material world that surrounds man in all its forms. The purpose of acquainting students with the concepts of the environment is to teach them to know and care for nature, to teach ecology and environmental protection, to develop theoretical knowledge, practical skills and competencies in environmental education.

This means that as long as a person lives, he uses the environment according to his needs and can do some harm to the environment. In this regard, it is necessary to develop the ability to form a positive attitude to the environment in the human mind. it will be necessary to carry.
