Education institutions and in general education system to manage improvement;
Pedagogical personnel preparation improvement and their qualification increase _
Education of the process new models designing;
Students psychological, ecological safety provide health _ to keep thrifty teaching technologies work output;
Education and education success provision, training process and of student's development control to do
new generation textbooks and study manuals Create and etc. _
Innovations different in degrees done increase can _ High to the degree whole pedagogical to the system effect showing innovations enters _
Progressive innovations scientific basically surface will come and practice forward to move help gives _ Pedagogy in science principle in terms of new and important direction – innovations and innovative processes theory to the body came _ Education in the field reforms - education institutions activity, development and himself develop them _ manage system fundamentally change and to improve directed innovations is a system .
1.1.2 Innovative processes done increase technologies and conditions
Pedagogical innovations known one algorithm according to done is increased. PI Pidkasti pedagogical innovations work exit and done increase ten stage defines:
1. Reform to be done pedagogical system of the situation criterion apparatus and counters work exit _ This stage you to innovation has been the need your determination need _

2. Pedagogical the system reform to do necessity special tools using determination for his quality complex check and evaluation.

Pedagogical of the system all structural parts to be checked need _ As a result, it is outdated , ineffective , illogical has been things reform to do need sure determination need _

3. Innovations modeling for active has been and use possible has been pedagogical solutions samples search _ Advanced pedagogical technologies the bank analysis to do based on new pedagogical constructions Create possible has been the material to find need _

4. Har bilaterally analysis to do scientific developments current pedagogical of problems creative the solution own into received (from the Internet received data useful to be can).

5. Pedagogical of the system whole or his separately parts innovative model design . Innovative project traditional from options difference who does to himself special shown features with is created .

6. Reforms integration done increase _ This stage tasks personalization , responsible individuals , problems solution to do tools determination and control forms installation need _

7. Labor change famous the law in practice to apply work exit _ Innovation to practice current from doing before his practical importance and efficiency right counting exit necessary _

8. Innovations to practice current reach algorithm build _ It is the same in pedagogy so generalized algorithms work developed _ They are renewable or interchangeable areas search practice analysis do , experiment and scientific data analysis based on innovations modeling , experience program work exit , his it is necessary to monitor the results corrections input , final control such as actions own into takes _

9. Introduction professional dictionary new concepts or old professional dictionary again seeing exit _ Him to practice app reach for terminology work on the way out they are dialectical logic , etc carry on theory and others principles action they do

10. Pedagogical innovation from pseudo-innovators protection to do That's it with together , of innovation to the goal compatibility and validity principle action to do necessary _ History that's it shows that sometimes big forces , material resources , social and intellectual forces unnecessary and even harmful to changes is spent . From this come coming out harm fix it which cannot be to be can , therefore for fake pedagogical to the news the way not to put need _ Only innovative to the activity imitation doer pseudo-innovations as the following examples to bring possible : education institutions pointers officially change ; updated the old one fundamentally

show as new ; to the absolute rotation and each how innovative of the teacher creative method creative again without work copy and etc. _

However , innovative processes for real barriers there is IN AND. Andreev from them the following determines :

Teachers known one part of conservatism (education institutions and education organs administration conservatism especially is dangerous);

tradition of the species blindly action do : "We don't care we are fine ";

Necessary pedagogue of personnel lack of and financial resources pedagogical innovation , especially experimental _ teachers support and encourage ;

word " innovation ". Latin from inovatis (in - in, novus - new) . received and it means " renewal , innovation , change " in translation the meaning means _ Pedagogical innovation is _ of students development , education and knowledge to get to improve directed change _

Innovation is _ system inside change _ So , it is pedagogical in the interpretation innovation is _ news input , available pedagogical the system change , improvement and improvement .

Pedagogical innovative technology - students study and knowledge activity encourage , encourage and increase for conditions creator scientific based on and reasonable selected content and organizational of forms integrity . Pedagogical in technology education of the process each one element and stage conditional is objective _ diagnosis to be placed to the result directed .

Society of development present stage economy , pedagogy and psychology of sciences new achievements based on education to the process innovative technologies current reach necessity sharp increased is going

Local pedagogy and in psychology study in the process of the person development external and internal to the circumstances depends said position installed . External appearances are as follows :

§ of the teacher pedagogical skill _

§ study programs reasonable build _

optimal education methods set _

However external conditions each always of learning internal conditions organize doer individual characteristics of a person , his another people with relations through breaks _ The second of the intern personality with determined psychological factors : level mental development , learning attitude , self organize reach features and other individual characteristics .

Own views and tastes system formation , norm and grades setting , to people relationship and others a lot in terms of psychological to factors depend _ Therefore

, one different technology pedagogical of activity all cases for recipe be ca n't These factors new education technologies to search requirement is enough

Innovative technology concept one series criterion and principles own into takes , their done increase education of the results efficiency provides .

1.2 Innovative technology of the concept essence and content

Pedagogical technology complex , whole process is own _ into people , ideas , problems analysis to do and planning , problems solution to do provision , evaluation and manage according to activity organize reach tools and methods own into takes , of education all sides cover takes _ Modern pedagogical technology such to understand education technologies according to theoretical and practical research direction determines
