Annotation

In this article we will consider the topic of unemployment, the consequences of unemployment, the causes of the problem, the analysis of the essence of the problem, which is a topical problem in the world community and difficult to solve. The problem of unemployment is also important in the Republic of Uzbekistan

Keywords: labor force, unemployment, causes of unemployment, unemployment losses, aspects of employment, employment assistance, Monocenter, Entrepreneurs' contribution, foreign methods, innovation

Relevance of the Article

It is well known that the labor force includes all people who are able to work and who want to work. It will have a group of workers and job seekers. In other words, the employed and the unemployed make up the labor force. This layer is an integral part of the life of society. In this case, if a person finds a job that is convenient for him objectively and subjectively, and is busy with it, it is a great light. If a person is not busy with any profitable profession suitable for him, he is forced to engage in other work. The reason is not to be busy with any work. It is an unspoken law that is proportional to the inability to earn. It is not a secret that it is impossible to provide material needs without income. The increasing unemployment in the society will continue to reduce the economic scale of the entire country as long as the population remains. The reason is that unemployed the unemployed population leads to a decrease in the incomes of the employed population. To put it more bluntly, an increase in the level of unemployment in the family will only harm its budget. If we understand with examples, in our Uzbek nation, the heads of the family, i.e. fathers, try to be more busy with work. In these processes, children who have grown up, are physically or mentally mature enough to work, and become part of the unemployed force the father to earn more. It would not be an exaggeration to say that if all working-class members of the family are busy, the distribution of the family budget and economic problems will be eased. "The country begins at the threshold," says our wise

people. It is known to everyone that a higher family income leads to a reduction in economic problems in society.

If we go deeper into the topic, how is the unemployment rate increasing in our country? After all, the fact that we, all the peoples of the East, have been a people thirsty for work since time immemorial is an indelible mark in the history?! Why don't our generations know this, or even if we do know, we continue this history passively. I think the reason is that our young generation is not using all the conveniences that have been created wisely. It is understandable to say that this is a "bridge" that leads to our state of lameness. the conveniences being created and the circumstances of achieving something without difficulties are leading young people to become more and more aware of the evils of laziness and laziness. It is known from our great history that in the past such conditions were completely alien to people. They have become mature people even without techniques. The reason for this was not the choice of profession, but how to devote oneself to one's profession was an important factor. Through this, they became specialists due to their love for their profession. In our current conditions, everyone is striving for professions that are financially high and physically difficult. Everyone is confused about which industry has the highest income. After all, even after they have found the profession, they are impatient with the difficulties and retreat back. This ultimately leads to problems in choosing a profession and to the loss of a lot of time. This raises a question. Why are our children having trouble choosing a profession, why are they interested in what someone else does, and why are they not thinking of creating new things themselves? Because of this, we can get parental neglect. They don't think about their children's interests and abilities, but about what profession is popular right now.

It is unclear to them whether their children have enough opportunities for work or not. The reason is that, as we said above, they do not spend enough time with their children, do not get to know their interests and dreams. As a result of this, the young people who take the professions chosen by their parents and who are forced to direct them in the sense of tone, are overcome very early due to their inability to cope with the difficulties and professional problems, or they are simply busy with work as a "nightmare". equally leads to economic loss. That is, if the situation of defeating him with impatience increases unemployment, busying himself with "sloppy" leads to becoming a mature specialist and in the future, not being able to stand in the field of strong competition. As you know, parents need to use traditional methods to prevent both situations from happening at all. If I explain these things, it will be understandable to everyone. Nowadays, it is necessary for parents to teach their children about common work. Keeping a child busy with both physical and mental

work ensures that he will grow up to be patient and tolerant of problems in the future. We had a little discussion with you about child education. The reason is that sufficient labor force is the first criterion of industriousness to reduce unemployment. Therefore, for the future of our children, we need to be concerned about their childhood and educational aspects.

Now, dear ones, we will have a conversation about the work being done in society to reduce the unemployment rate. There is a Ministry of Labor and Employment in the Republic of Uzbekistan. This ministry is doing a lot of work to provide quality jobs to society and reduce unemployment. But the main goal is to fight unemployment. The reason is that preventing the increase of unemployment is an important task. Because if it is not fought every day, the increase of the population will serve it negatively. We all witnessed that Monocenters were established in our Republic.

Today, the experience of our country clearly shows that the most effective way to provide employment to people, to attract them to some type of activity, is to train them in a profession. In the past short period of time, it is necessary to attract young people, especially the unemployed population, to this system, to teach them a trade that will help them in life, regardless of whether they will continue higher education in the future, to find a job in their profession. creation of runes has become one of the priorities of state policy.

At the beginning of such good works, by the decision of the President, the monocenter was established as an experiment under the Ministry of Employment and Labor Relations, and it started its first activity in September 2019 in Yashnabad district. was A total of 22 professions have been started in the center, which can train 5,600 people per year, in such areas as construction, household service, and technical engineering, which are in high demand. For this, the necessary technical equipment, innovative rooms, and a team of qualified pedagogues were created in the center.

According to the analysis, the majority of those who use Monocenter's service and apply for vocational training are women. The results of the short-term activity of the center showed that such an institution plays an important role in ensuring the employment of the population, especially low-income women in need of social protection, and the need and demand for opening its branches in other regions of the republic is high.

The decision of the President of August 11, 2020 "On additional measures aimed at attracting the poor and unemployed population to entrepreneurship, increasing their labor activity and vocational training, and ensuring employment of the population" monocenters became a normative basis for increasing the number. Currently, "Ishga

Merhamat" monocenters are gradually providing their services to the population in 15 regions of the country.

If we give more vivid examples, great benefits are given to Entrepreneurs for creating jobs. Their financial support and the fact that they are given the opportunity without various restrictions and commission inspections is a proof that a fair policy is being conducted towards them. It can be seen from this that if the government gives a privilege to an entrepreneur for creating a job, the entrepreneur is providing the government with taxes and employment. Therefore, our government is opening wide doors of opportunities for entrepreneurs in all sectors. As a result of this, labor employment. it is a guarantee of achieving security and ensuring the well-being of the people.

To sum up, the fact that there is a lot of propaganda-campaign work mentioned above is a good thing. The reason is that the main layer is busy, first of all, in small areas, and besides, it has a positive effect on the economy of our country. shows and achieves economic growth and economic development. The opportunities given to workers in developed countries, that is, the matching of working hours to the volume of work and salary, encourages us to use such experiences in our country. As a result of this, the aspiration of workers to their profession and increase in work productivity is ensured. This practice is a country in itself. It will dramatically reduce the economic stagnation and ensure that it will stand in the top positions in the world community. The development of all sectors in the country depends on the labor force, and if the workers succeed in the production and service sectors, there will be an increase in all sectors. income from exports and tourism will increase and the level of poverty in the country will decrease. Therefore, we believe and hope that the young generation will use all opportunities wisely and become selfless and perfect personnel for our society.
