

## DIFFERENT FORMS OF PROPERTY

Tuychieva Nodira,  
Assistant of JBNUU

Suyunova Bibixonim,  
Student of JBNUU

### Annotation

At the current stage of society's development, this property includes, in addition to state property, various types of collective property in the fields of production, service and demand, social society property, household and private estates, and individual labor activities. It includes personal property of workers, economic relations, mixed property and private property.

**Keywords:** Property, state property, community property, mixed property, property rights.

The market economy requires a variety of forms of ownership, because goods are traded only when they are a specific property. It is also stated in the Constitution of the Republic of Uzbekistan: "The basis of the economy of Uzbekistan aimed at the development of market relations is property in various forms." Therefore, in the Law of the Republic of Uzbekistan "On Ownership", various types of property are included in the following types of property: state property, collective property, private property, private property, mixed property.

The existence of different forms of ownership and their economic criteria are primarily related to the development of productive forces and the degree of generalization of production. At the same time, the forms of ownership should be compatible with the state of the productive forces, social division of labor, and the level of maturity of organizational and economic relations.

State property - when the property belongs to the state, ownership, use and disposal of the property is at the discretion of the state. State property is created mainly in two ways:

- 1) Nationalizing private property and taking it into the hands of the state;
- 2) Building enterprises at the expense of state funds, making investments in state-owned enterprises and organizations.

Public property is well-suited for the use of truly public, indivisible, or common resources. Examples of this are non-renewable natural resources, large structures and vehicles, and a large part of the economic structure, such as roads.

In accordance with the Civil Code of Uzbekistan, state property consists of the property of the Republic and the property of administrative-territorial structures. Land, underground resources, water, air space, flora and fauna and other natural resources, property of republican authorities and management structures, cultural and historical resources belonging to the state, budget funds, gold reserves, currency fund and other state funds are the property of the republic.

In the property of administrative-territorial structures, the property of local bodies of state power, local budget funds, municipal housing fund and communal enterprises and other property complexes, public education, culture, healthcare institutions, etc. will have property.

In countries transitioning to a market economy, the task of economic liberalization requires reducing the monopoly of state property. Because a healthy market economy does not come with a state monopoly, a monopoly prevents competition.

As a result of the expropriation of property, the share of state property in the economy decreases, and it mainly becomes community property, in some cases, citizen property and private property.

The contribution of state-owned enterprises in the creation of fixed assets, number of employees, gross national product and national income will decrease, while the contribution of enterprises belonging to other properties will increase.

Community property means joint acquisition of material and spiritual wealth by people united in a community for a specific purpose. Community property appeared through such ways as the purchase of state property by an enterprise team, the establishment of an enterprise by paying contributions, issuing shares and selling them. An important feature of collective property is that the means of production and the product of labor are not owned by certain individuals, but by a certain group of people.

Community property includes the property of corporations, rental and collective enterprises, shareholder societies, economic societies and companies, collective organizations and religious organizations.

The main feature of corporate property is the collective-group nature of the appropriation of the means of production and its results. In this type of ownership, the combination of producers with the means of production takes place within a certain labor team. The use of the means of production and their appropriation is

carried out within the framework of the labor team, which is the owner of the property, and there is a commonality of collective and individual economic interests.

Establishment and operation of corporations in agriculture, industry, construction, transport, trade and public catering, paid services and other sectors of production and socio-cultural life, scientific and scientific-technical services possible

Corporate activity is divided into three main types: production, distribution and mixed corporations.

Production corporations are based on the personal labor of their members. Each of the corporations in other fields of production and services has its own characteristics, among which agricultural corporations stand out.

The main form of agricultural production corporations are collective and cooperative farms.

For example, within the framework of collective farms and other agricultural enterprises, collective and family contracts, and under the conditions of renting land plots and basic funds, corporate communities are formed, whose income depends on the final result.

In addition to the state form of ownership, the role of corporations in solving a number of issues of the development of the industry (building housing, other objects of social infrastructure - sanatoriums, rest houses, kindergartens, etc.) is increasing.

On the basis of personal property of workers, the production and service industries, house building corporations, garden and real estate companies and similar corporations are developing.

In order to better meet the demand of the population for goods and services in the cities, state enterprises and organizations are taken out of their control and various property cooperatives are being formed. The property of the property cooperative originates from the state and other forms of ownership. Its members do not need to participate in the activity of this form of ownership with their labor. Property cooperatives can be established independently or under various enterprises, organizations and institutions. The property cooperative system uses the rights established in providing services, the sale of products grown on private homesteads and folk handicrafts on the basis of a contract.

Personal property occupies an important place among forms of property. Personal property is the property of citizens and serves to satisfy their personal or family needs. This form of property increases and develops mainly based on the labor of a person or his family members.

The personal property of a citizen is mainly created and increased due to their participation in social production and the labor income from running their own

economy. In the conditions of the market economy, personal property is based on new sources, such as dividends from shares, bank interest, income from private entrepreneurship.

Objects of personal property are residences, gardens and houses, vehicles, money savings, household and personal consumption goods, individual and other necessary production for economic activities. means of release, they may contain products, etc. According to the Law "On Ownership in the Republic of Uzbekistan", smaller enterprises in the field of trade, public catering, household services, and other sectors of the national economy may be owned by citizens and their family members. Personal property objects can be used to generate income beyond the scope of meeting needs.

Private property is property based on hired labor owned by some entrepreneurs and beneficial to its owner.

The law of the Republic of Uzbekistan on ownership (Article 7) states that private property consists of the right to own one's own property, use it and dispose of it. At the same time, it is noted that the amount and value of private property is not limited. In conclusion, it should be said that private property, like any other form of property, has its positive and negative aspects. Undoubtedly, it encourages initiative and entrepreneurship, responsible attitudes towards work. At the same time, in the conditions of production of goods, it gives rise to the feeling of desire to make a secret profit. Recognition of this form of ownership requires the identification of links in the national economy where it is useful to use it, and the formation of financial and legal mechanisms for its regulation. But such recognition of private ownership is not at all related to its absolutization. This property can be created by running an independent business on the basis of purchased means of production or by purchasing state enterprises, corporate firms, warehouses, kitchens, etc.
