Also, the further liberalization of the economy in the context of the priority directions of development of small business and private entrepreneurship, the provisions of the basis of proposals and recommendations for the solution of scientific and practical problems in this area to continue to develop more consistent attention.

Keywords: small business, entrepreneurship, strategy development, micro, further liberalization of the economy, globalization and international integration process, "the man for the value of" principle, to make transformative of the economy, competition, goods and services, pricing stability, the charm of investment activities, the legal basis, efficiency, transparent business activities.

Introduction

in the clause it is considered to be all-round protection of private property and role the improvement of their economy, consider the barriers for development of small business and private business activity of subjects in an entrepreneurial activity, reduce government probably these in an entrepreneurial activity, Increases in business and a share of a small business internal conditions studied, it is the development of a national product is also offers a small business and private business in the sphere of enhancement and developer of the country. It is aimed at strengthening the economic power of support and encouragement small business and

entrepreneurship within our country, peace and stability in our country, further increasing the share of those sectors and social harmony. Also, in the context of further liberalization of the economy, it is focused on the priority areas for the development of small business and private entrepreneurship substantiating businesses, more consistent development of existing scientific and practical proposals and recommendations for solving the problem in this area.

ACCESS

Identify ways of mutually beneficial cooperation between small and medium enterprises in the world, the analysis of the defining factors of useful contacts, as well as strong inter-firm relationships, the creation of small business products and increase the competitiveness of the product as directed to reduce the cost of solving problems in the directions of scientific studies being conducted. The activities of this small business entities at the international level that would be established on the basis of observation of competitiveness tendensiyasiyalarini and this trend requires further increase the effectiveness of the activities of small business entities in the future.

These new building Uzbek carried out in the context of rapid socio-economic reforms of small business and entrepreneurship plays an important role in the economic development of a country is the main factor. Because small business and entrepreneurship in all sectors of economic development has a direct impact. In particular, assists in increasing the export potential of the internal market and supplement them with goods and services. His small business and entrepreneurship, which requires small investment, quick return of major modernization and production in moslanuvchan elasticity and have the opportunity to increase the range of products manufactured faster than production.

See confirmation in the economy create the various ownership, small business and private entrepreneurship in the development of the country's economic policy direction from the first days of independence are viewed as a priority. In this regard, the president of the republic of uzbekistan "uzbekistan's development strategy on new years 2022-2026" a decree[1]also the world's vital essence and passed the results of the scale complex processes in the development of the country in the next years in the case of a deep analysis of "man of value" to increase the wellbeing of our people on the basis of the principle of the economy and development of transformative entrepreneurship, human rights, and interests and provide unconditional aimed at the formation of provisions to identify priority areas for the development of active civil society refers to.

Provided strategic development at one of the most important tasks of the induced state involvement in the economy to reduce its priority the protection of private property rights and the further strengthening of the position of small business and private entrepreneurship, aimed to stimulate the development of institutional and structural reforms and to continue to offer.

A variety of positive changes underway in the economy of the country in many ways intertwined with the development of small business and private entrepreneurship. The resolution of this area is underway in the field of business development and is sensitive to changes in any of the find. In uzbekistan the developing of market relations based on principles of private ownership, which represents at the present time the development of private entrepreneurship and small business, and without form qonuniyat these are giving particular importance to the development.

The President Of The Republic Of Uzbekistan Sh.Mirziyoyev oliy majlis in reference to "...a comprehensive business units developed for district 26 – 1-into categories; infrastructure district 46, which is good – 2-into categories; the district, which is 76 units conditions than satisfactory – 3-category; insufficient charm district 40 – 4-into categories; severe conditions the district 20 – 5-into the category of" himself of the idea that first small entrepreneurship, which suggest that the high level of attention by the government [2].

The development of entrepreneurship and small business activity increased the level of state demokratlashtirilishi the openness of the national economy and the business environment is one of the main criteria. Many developed and developing countries of the practice of small business employment and income are the most important tool of the population of that colossal suggest that both increased. Competitive pricing of goods and services in this sector of the economy is stable to hold steadily the quality of the product and thoroughly entrepreneurs to motivate the introduction of new technologies. The huge potential of small business be it material, financial and human resources as one of the main factors of production, along with capital and allows you to.

ANALYSIS OF THE LITERATURE ON THE SUBJECT

The essence of doing business on its content unless they are first and foremost the word should be understood. That we have to look at the history of business have occurred in the division of labor, available capital, trade and service sector in the development of society suggest that all available. The approach of the market economy for the first time as an independent institute of business R. kant fail to keep'research on can meet. His research the difference between market demand and production

capacity, permanent capital on the contrary, some persons of quality as a violation of the balance of the market speculation (speculative) to determine which would give the opportunity to get income.

Also, keep r. kant exactly to fail'in science on the economy "business" from the phrase (entrepreneur fr. tool) I have used the first time scientists. In his opinion, many of maintaining understand specific business deylganda production and economic activity, will cover various risk elements in business in advance, see, go and get take full responsibility for that decision to the owner of a talent like[3]. R. Kantiloning insights that we have attention, it is the task of managing entrepreneurial capitalism with his mind clearly separated from the function or business activity, it is possible to realize the assignment based on the absolute risk.

"Business, showing that it was at their own expense, to go in their favor the production of the product is how the person is located the entrance is." Thus, the human factor is the only work, as well as cover the required knowledge in particular it was noted also for the organization of production[4]. Ceylon j. b. business similar to other factors in the interpretation of the properties of the production of I will pay particular attention to.

A. smith and d. ricardo members of the English classical school, when we say namoyondasi business capital owners(capitalists)to understand if they were in his works a. smith's "business" in order to get the benefits when I say how I understand the owner of capital ready to risk the implementation of economic ideas. In his opinion, the main factors of production in the market economy, the entrepreneurship initiative, which will appear by accident in the existing conditions of independent business is operated on the basis of[5]. This exercise and its results with production planning to dispose of its own independent business with "business" and "capitalism" does not look as synonymous to the concept.

Another representative of the classical school of economic theory, ricardo noted that only capital d. is unlike them business owner, appeared, with the activities of the investment business making equal[6]. D. ricardo with his studies of entrepreneurship and social responsibility responsibility is the first set of "just business benefit should also directed to bring benefits to society"- that was necessary, it was noted that entrepreneurs came up with the idea for the society.

Jacques Tyurgo work is mentioned in the important role of capital in business, those who are engaged in production activities for the first time by jacques exactly tyurgo business hire and showing their work in the composition of separated[7].

Shumpeter Y. the importance of entrepreneurship on economic factors as land, capital and labor, create with the news of a row. His conclusion, "according to Enterprise

(Unternehming) when exercising a combination of new implementation, as well as combinations of these plant performed and so on, are also provided. Entrepreneurs (Unternehmer) that, while the implementation of its implementation and active combinations of elements of the same function of entities that appear as the call”-has been described as[8].

Our academic scientists, researchers within the framework of the chosen theme G'ulomov local s. s.[9], a. sh.Bekmurodov[10] B. Berkinov[11] M. S. Kasimova N. Samadov A.[12] K. Muftaydinov, H. Aybeshov[13], Either.Abdullaev, F. Karimov[14] d. h. Suyunov[15] and others small business and private entrepreneurship, the development of indicators of the efficiency of the sector, conducted research on the study of problems in practice.

The theme in the work of scientists within the framework of the induced more specialist businesses and organizations approach them on the impact of wide and deep in the studied section of the overall economy, focuses on the development of small businesses, not exactly.

RESEARCH METHODOLOGY

The results of research on the basis of the methodology of the president of the republic of uzbekistan on January 28 2022 in 2022 - 2026 designed to uzbekistan's development strategy on the new”up-60-the number of times[1]at small business and set priorities that drive the economy of the republic of proceeding from the activity of subjects of private entrepreneurship track being selected in the method of the network structure, the network share in statistical analysis, a systemic disorder condition on the active, small businesses and the development of logical thinking, analysis of the results obtained on the basis of the synthesis methods were used.

ANALYSIS AND RESULTS

Globalization of the world market in recent years observed the fact that small business owners and entrepreneurs drive the country's economic growth has been seen. The importance of small business in the economy in the last twenty years of research into the creation of new enterprises related to a wide range of economic well-being, has been consistently showing that would lead to. Developing networks playing a decisive role in the increasing of the competition, along with the potential for economic growth and innovation in many areas of new small business is very important.

Innovative development of the economy of the country for economic development of the state program to support the production of relevant institutions and their resources supply is not sufficient of itself. The continuous emergence of new

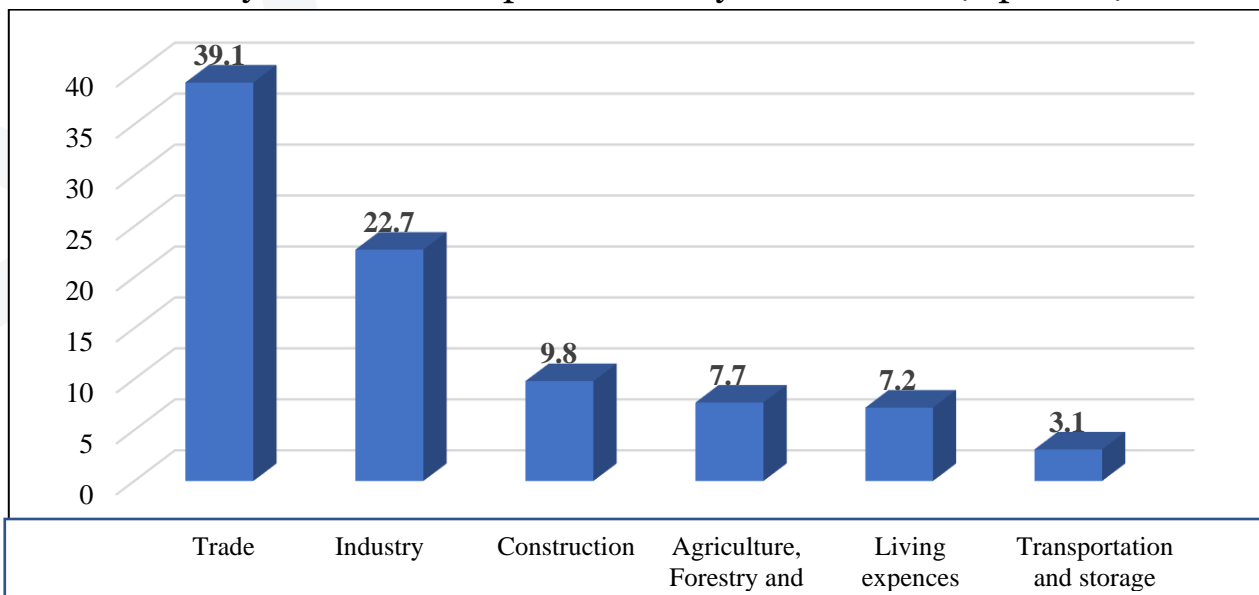

innovative small business guaranteed if carried out in the context of the development of enterprises can be considered. Standing in front of the most important entrepreneurs in their business to identify issues or problems, including a number of to attract new customers, capital and access to financing, and to attract new employees did not pay attention to the problem associated with the effective management of the business. It basically basically to decide on the development of small businesses, especially with the staff to pay more attention to salohiyatlarini aimed at increasing economic function problems - to keep their business, get to work and the development of the necessary skills, providing for small businesses and the central problem, which is the new technology-equipped with the technology, it is desirable to give importance to.

Small business entities created favorable conditions for the year 2020 specific programs targeted to the practice of active dramatically as a result of the introduction were observed in industrial production, the share 32,8 %, respectively. The expansion of the activities of small business entities in other industries and sectors of the economy, is manifested by the increase in production volume of the weight.

Such results are primarily small businesses in the sector to support the activities of the reforms carried out by the state is a result of the fact and constant in recent years, their share in gdp increased to the size of the products produced by have been identified. The year 2019 54 more than thousand small and micro enterprises have been established by 2.0 times compared to last year is a lot of (1-picture).

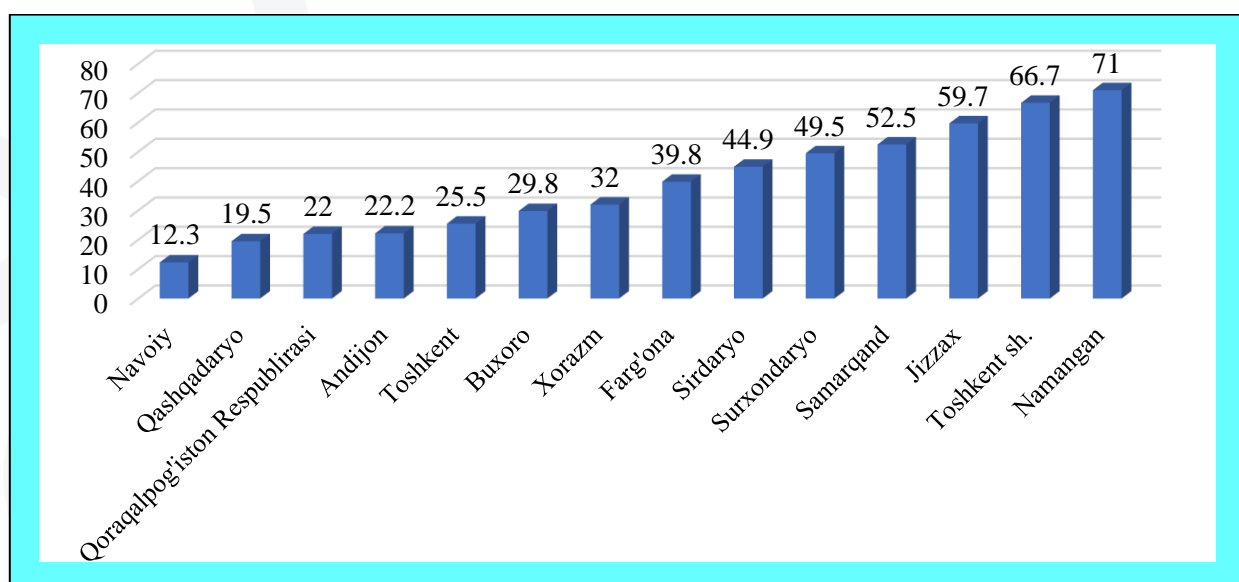

1-picture. Small and micro enterprises by type of economic activity in the year 2020 share,%[8]

1-the picture in the country in small and micro-economic information about the share by type of activity if it is listed, the most in the structure of the small business share trading 39,1 % for industry in the field of 22,7% to construction while 9,8 % of it. Indicators come on to the lowest area of transportation and storage, manuals of 3.1% is from. In the current period, the rapid development of the activities of small business entities in the country to ensure the formation of new types of innovation here, consistency, environmental cleanliness, openness, and shared the new concept of development, which includes the use of quality principles should be developed.

To put forward business ideas, entrepreneurship, local economic development is the driving force of the program. A large part of the private sector jobs in small and medium enterprises in all countries, in particular, is organized by the cooperative; these companies will contribute to ensuring that all young people with a new job. See also, the actions of individuals, which connects the area with the two new makroiqtisodiyot to stimulate entrepreneurship and entrepreneurial skills to strengthen the conceptual basis for the improvement of business conditions on the basis of a comprehensive approach as the basics of the two main column to come to the conclusion that you will rely on it.

In addition, it is necessary to take the factors involved in the organization of regional small businesses. The reason is that the specific characteristics of each region has. Small and micro enterprises in some areas the level of activity remains low.

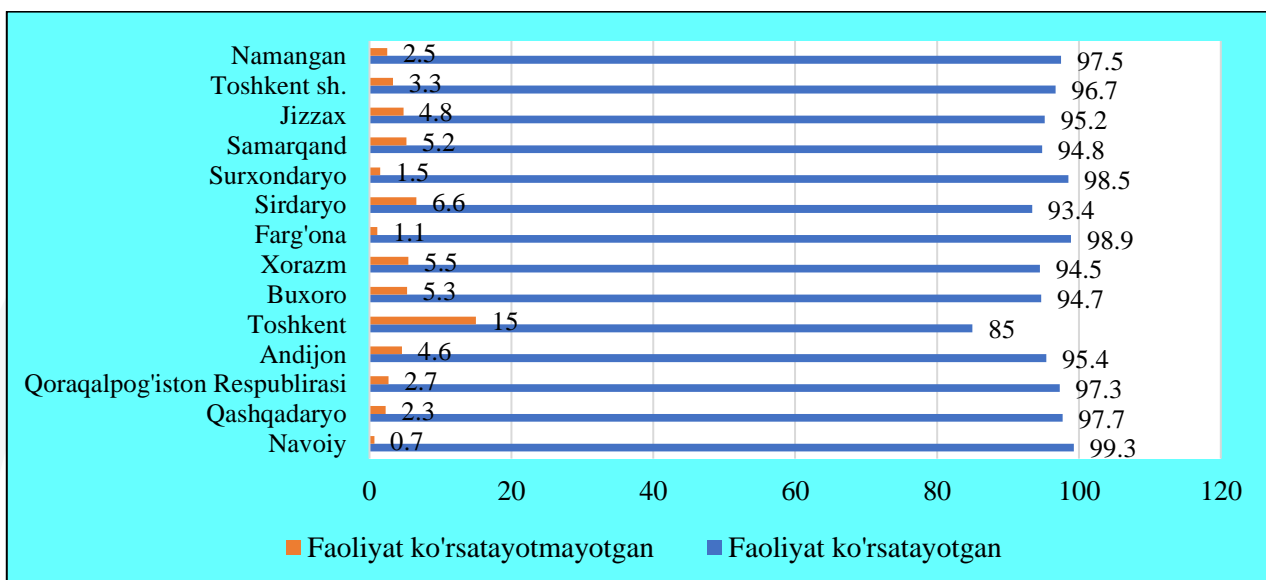

2-picture. Share on entrepreneurship in small regions of total industry output in the year 2020,%[8]

2-incisions in the picture information on the share of small businesses in the areas of products in the industry if it is not given your share of industry in the region namangan is observed at the top of a small business, 71% had in the city of tashkent, 66%, jizzakh region 59,7 %and the lowest share is observed in the region navoi in the case that 12,3% and has. Through the support of small and micro enterprises, small businesses, the level of activity of a lower growth rate compared to the previous period observed.

The following 3-active small and micro enterprises in the picture if information is given on the condition, the activity region navoi minimum share of 0.7%, and organization than 79 (3-picture).

3-picture. In the areas of micro enterprises and small incisions in the year 2020 is a disorder condition on the active ingredients, %[8]

Activities in the region tashkent providing for 85%, while the activity is being shown is 15% which. Providing activities in the region syrdarya 93,4 %for show business while 6,6% is from. The economy of the country operating in the field of adaptation and competitiveness of micro and small business in our country today all the requirements of a number of positive changes began to occur. As noted earlier, certain regions of small and micro enterprises and sectors of the process of specialization and experience.

In recent years, as a result of the reforms carried out in the economy of the country, the number of small and micro enterprises has been reduced from year to year. According to the results of studies have been conducted in our country, the development of small businesses in the regions of the country it is necessary to take

the opportunities given. While serious structural changes caused by the state support works in the area.

In our opinion, the activities of small business entities in the country should create favourable conditions for them, the formation of a reliable legal framework, create all conditions for business activities to ensure transparency of the activities to increase the effectiveness of the area, it is necessary to increase the attractiveness of investment activity is expected to be attracted to.

CONCLUSION AND SUGGESTIONS

Small businesses, of regional factors, as a rule, dominate in terms of the effects of the process to attract investment. The investment climate analysis noted the need to have to go out on the network. Because the positive factors have specific ways to different sectors of investment. In some cases other factors that may play a positive role in a network or if the network is enough if we show up negative for any indicator for a particular network, the other network can be less successful in itself to the successful development of fundamentally the same.

Small business and private entrepreneurship in Uzbekistan on the network of particular interest for the investment environment poses. In order to ensure the investment attractiveness of small businesses, you will need to list the following features:

- define the subjects for the development of small and mechanisms to give priority to the development of systems of state support;
- market sector was standing on the position of large, medium and small business enterprises to create special opportunities;
- come out geographic location for each region, the specific activities offered identify and access appropriate to the types of small business entities. The main purpose of them involved in the activities of small business entities in certain areas of comprehension is to expose directed to investment.
