

## DIDACTIC CONDITIONS FOR THE PREPARATION OF STUDENTS OF VOCATIONAL EDUCATION FOR PROFESSIONAL ACTIVITY BASED ON AN INNOVATIVE APPROACH

Inoyatov Ikrom Shakhriilloevich

### Abstract

This article discusses pedagogical conditions-the conditions of the environment in which pedagogical factors arise. The requirement of pedagogical conditions can be considered as a set of measures to ensure the achievement of a professional and creative level of thinking in the learning process. Today, the problem of the formation of a free personality requires the transfer of educational work in educational institutions to modern pedagogical technologies.

**Keywords:** Modernization, agronomy, hydropower, irrigation, land reclamation, innovation, specialization, hydro-reclamation, pedagogical, modification, managerial, objective, professional, civilizational

It is known that in the present period, the updating of techniques and technologies in production, the rapid development of science and technology require specialists to independently and regularly deepen, update, supplement and expand their knowledge. The analysis of pedagogical experiences shows that the optimization and acceleration of the educational process is not only related to the improvement of the educational content, various methods and forms of teaching, but also the education used in the teaching of subjects. It is also a problem related to the extent to which the educational institution is provided with didactic means of teaching. Because mastering the topics in the program depends on knowing the capabilities and functions of the teaching tools necessary for this topic and using them correctly. For this, the teacher needs to know the possibilities of teaching tools well. Such conditions will be a good opportunity for students to prepare for production and professional activities. What are the didactic tools of your teaching? Didactic tools are a component of the material and technical supply of the educational institution, forming the necessary knowledge, skills and qualifications of students, managing their educational knowledge, learning, and progress. It is a system of materials used in the educational process for proper development and education. Didactic tools have an important place for the transfer of educational information (informative), management and control of the teaching process, as well as in the activity of the teacher and learner of the educational content. requires use in In order to properly

use didactic tools in the process of learning English, it is necessary to know their types and functional capabilities. Therefore, it is necessary to have an understanding of the functional (service function) of each teaching tool. Depending on the nature of the effect - visual (visible) - diagrams, demonstration equipment, audio albums, tape recorders, radio) audio visual (televisions, video films); According to information transfer or transmission - paper (textbooks, files), magnetic (films), electronic (computer programs), laser (CD-ROM); According to the content of education - teaching tools at the lesson level (texts, etc.) In relation to technological progress, traditional (visual aids, museums, libraries), modern (information tools, multimedia teaching tools, computers, websites, local and global computer sets, etc. Education is of decisive importance in the socio-economic, cultural development of society. Especially in the 21st century, the demand for education is growing at an unprecedented level. The young generation needs new knowledge, ideas and visions. Education is a decisive factor in the acquisition of skills, social, cultural and economic development.
